Every bird in every flock of breeder stock is Pullorum Tested to **ZERO**—which means there are **NO REACTORS** left in any of the flock from which **ALL** of Reuter's High-Quality Chicks are produced.

What does this mean? Answer—**greater livability**. Chicks hatched from healthy pullorum flocks live—and pay—and while we do not make any livability guarantee—other than 100% live arrival—it is not the exception but the usual that our customers report from 90 to 100 per cent livability—substantiated by letters in our files. **WHEN BUYING CHICKS DEMAND QUALITY—DON'T SETTLE FOR LESS**. Cheap chicks never pay—we don't sell them. We do sell High-quality Chicks **BECAUSE THE PARENTAGE BEHIND THEM IS THE BEST**. Our AAA Grade Chicks are equal to most other 4A Chick offerings—our 4A Royal ROP Sired CHICKS are truly half pedigreed on the male side—and are **OUR BEST**.

Vegetable Seeds of Unsurpassed Quality

The Vegetable Seeds offered in this catalog represent the most outstanding achievements in scientific seed-breeding and seed-growing. Reuter Seed Co., Inc., has carefully selected only those types and strains that have positively demonstrated to their own satisfaction to possess superior characteristics that will

meet the rigid requirements of discriminating commercial growers and shippers to whom quality, as well as price, is today an important factor. Reuter backs them with more than a half century of honest and conscientious seed service. You can plant them with utmost confidence. **Reuter challenges comparison.**

ASPARAGUS

One of the most delicious of all vegetables. Easily grown in any deep, rich soil.

Culture. Sow thinly in drills 12 inches apart in the Spring. Thin to about an inch apart. Transplant roots to permanent bed which has been dressed liberally with stable manure or peat moss and a good fertilizer. Make the rows 4 to 6 feet apart. A bed 15 by 20 feet requires 100 roots. One ounce of seed will sow 50 feet of drill; 2 to 3 pounds, an acre.

4 Mary Washington. Very productive rust-resistant variety. The shoots are of large size, excellent quality, and a rich deep green color tinted purple at tips. Pkt. 10c; oz. 25c; ¼ lb. 70c; lb. \$2.25; 5 lbs. \$10.25.

ROOTS. Extra-large roots that save you 1 to 1½ years' time. 25 for \$1.35; 50 for \$2.15; 100 for \$3.75. Not prepaid: 1000 for \$32.00.

Asparagus

ITALIAN BROCCOLI

This vegetable aristocrat is rapidly attaining unusual popularity. The rapid-growing, tall-branching plant forms, within 90 days, a central head of bluish green flower-buds resembling a loose head of cauliflower. After the head is cut the plant produces many side-shoots, each one bearing a small head over an inch in diameter. These shoots, when about 6 inches long, are cut and marketed 2 and 3 to the bunch. It is cooked and served like cauliflower.

Culture. Very easy to grow. Culture same as for cabbage. It requires a definitely cool season for its proper growth. One ounce will produce 1,500 plants; 4 to 6 ounces, an acre.

73 Green Sprouting

A very prolific mid-season variety that is excellent for market, shipping and freezing. Produces compact central heads and numerous laterals. Pkt. 10c; oz. 35c; ¼ lb. \$1.00; lb. \$3.50; 5 lbs. \$15.00. Not prepaid: 10 lbs. \$27.50.

72 DeCicco. An extremely early strain ready for market 10 days ahead of Green Sprouting. Produces fine large compact heads and a high percentage of side shoots. Pkt. 10c; ½ oz. 30c; oz. 50c; ¼ lb. \$1.50; lb. \$4.50; 5 lbs. \$21.25. Not prepaid: 10 lbs. \$40.00.

BRUSSELS SPROUTS →

This unique member of the Cabbage family is highly prized for the small shoots, resembling miniature Cabbages that are clustered around the stem.

77 Long Island Improved

BEANS

FOR HOME
MARKET OR SHIPPING

How to Grow Beans: Plantings commence in the Lower South during January, February and March. Sow $1\frac{1}{2}$ to 2 inches deep, 3 to 4 inches apart, in rows $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart. Cultivate often until plants blossom. Deep cultivation when in bloom will cause

many flowers to fall, and cultivating when vines are wet with dew may cause rust and spread anthracnose if it is present. Frequent picking insures a prolonged bearing season. Two pounds will sow 100 feet of row; 60 pounds (bushel), an acre.

GREEN-PODDED BUSH BEANS

16 Stringless Black Valentine (Certified).

53 days. It has become one of the leading varieties planted by commercial growers for shipping. The hardy plants are large, vigorous, erect and very prolific. The oval pods are $6\frac{1}{2}$ to 7 inches long, nearly straight, dark-green, distinctly stringless, quite fleshy and of fine quality and delicate flavor. Attractive in appearance, of high edible quality and has become the most popular variety for the trucker and shipper. $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50. Not prepaid: 15 lbs. (pk.) \$4.75; 60 lbs. (bus.) \$17.25; 100 lbs. (bag) \$27.00.

43 Contender (Certified).

48 days. Contender (Buff Valentine) has now come to the front as one of the best green-podded bush beans. The pods are about $6\frac{1}{2}$ inches long, slim, near round, dark green and stringless. The plants are very hardy and are resistant to mosaic. Flavor and attractiveness in appearance are further reasons why Contender should be the bean for you. $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 65c; 2 lbs. \$1.15; 5 lbs. \$2.50. Not prepaid: 15 lbs. (pk.) \$5.10; 60 lbs. (bus.) \$18.50; 100 lbs. (bag) \$29.00.

50 Wade. 52 days. Gold Medal Winner 1952 All-America Selection. Resistant to mosaic and powdery mildew. The pods are deep green in color, $5\frac{1}{2}$ to 6 inches long, round, slender, and with reddish brown seeds. Growing taller than Tendergreen, it holds its pods off the ground and yields heavily. It is smooth in appearance and has excellent marketability qualities. Another feature is slow wilting—it loses its water content slower than most other beans. An outstanding new bean. $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 70c; 2 lbs. \$1.25; 5 lbs. \$2.75. Not prepaid: 15 lbs. (pk.) \$5.65; 60 lbs. (bus.) \$21.00; 100 lbs. (bag) \$33.00.

7 "Tendergreen" Stringless.

52 days. A distinct green-podded bush bean, enormously prolific, entirely stringless, and bearing a profusion of finely flavored beans that are more tender than any other variety. The pods are 6 inches long, round as a pencil, very meaty, smooth, and of a lovely dark-green color. The erect vines are exceptionally strong and vigorous, producing an enormous yield of straight, beautiful pods. $\frac{1}{4}$ lb. 20c; $\frac{1}{2}$ lb. 35c; 1 lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50. Not prepaid: 15 lbs. (pk.) \$4.75; 60 lbs. (bus.) \$17.25; 120 lbs. (bag) \$32.50.

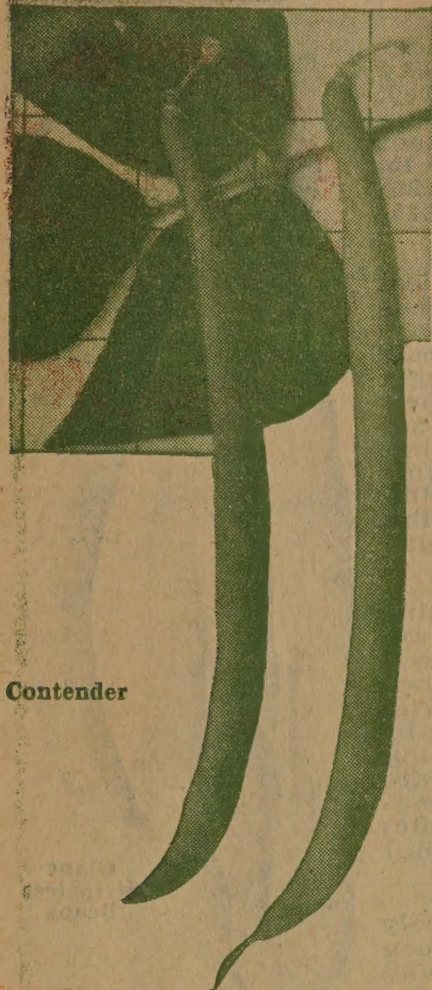

31 Topcrop. 52 days. Gold Medal Winner

1950 All-America Selection. One of the earliest of the green-pod bush beans. The pods are five and a half inches in length, round, dark green, stringless, and resistant to mosaic disease. The bush grows about fifteen to seventeen inches high with a good concentration of pods. $\frac{1}{4}$ lb. 25c; $\frac{1}{2}$ lb. 40c; 1 lb. 70c; 2 lbs. \$1.25; 5 lbs. \$2.75. Not prepaid: 15 lbs. (pk.) \$5.90; 60 lbs. (bus.) \$21.50; 100 lbs. (bag) \$34.00.

DANISH GROWN CAULIFLOWER

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight in order to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, as soon as the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; ½ pound sufficient for an acre.

144 Early Snowball. 55 days from plants. The large heads are snow-white, solid, finely grained and deep. It heads so evenly that the entire crop may be harvested within a short time after it begins to mature. The erect leaves are large and curl over the heads protecting them from the sun. The heads make a beautiful appearance on any market and sell for the highest prices. Pkt. 25c; ¼ oz. 75c; ½ oz. \$1.25; oz. \$2.25; ¼ lb. \$7.00; lb. \$25.00.

148 Helios (Original) Helios is an outstanding Danish introduction in Cauliflower. The large, solid heads are snow-white with uniform tall, upstanding protecting foliage. It is a late maturing variety with the foliage affording excellent protection against cold weather. Especially recommended as a late maturing crop following the Snowball. Pkt. 30c; ¼ oz. 80c; ½ oz. \$1.45; oz. \$2.60; ¼ lb. \$8.25; lb. \$30.00.

Spinach leaved SWISS CHARD

68 45 days. Distinct from other Chards; highly prized because of its superior flavor, entirely without the somewhat bitter taste of ordinary Swiss Chard. You will relish it like a good variety of spinach. The dark, glossy green leaves are fairly smooth. The lighter green midribs are tender and edible. Cooked and served as "boiling greens" in the same way as spinach. It is very hardy and withstands severe summer heat; therefore available when spinach cannot be grown. Many people who detest spinach find our green-leaved Swiss Chard a more palatable substitute. Pkt. 10c; oz. 20c; ¼ lb. 50c; lb. \$1.50; 5 lbs. \$6.75. Not prepaid: 10 lbs. \$11.50; 25 lbs. \$27.50.

SWISS CHARD

Assures you an abundance and never-failing supply of fine "greens" all through the summer and fall months. Gives maximum returns for little care and space. Gather when half grown for best flavor. Cut close without injuring the heart of the plant, and another crop will spring up. Grows in any ordinary garden soil. Sow in rows 12 inches apart, and thin to 5 inches apart in the row. One ounce will sow 100 feet of row; 4 to 5 pounds, an acre.

SEA KALE BEET

64 Giant Lucullus. 55 days. The rich green, fleshy, heavily crumpled leaves of this variety make very tasty "greens." The erect plants attain a height of 2 to 2½ feet. Largely sought after by those who prefer the thick, creamy white stems or stalks which are edible and tender, and may be served as a separate dish like asparagus. The leafy part can be cooked like spinach or turnip-greens, or if desired the whole leaf can be boiled and served as "greens." Pkt. 10c; oz. 20c; ¼ lb. 60c; lb. \$1.75; 5 lbs. \$7.75. Not prepaid: 10 lbs. \$13.00; 25 lbs. \$31.25.

Crisp delicious LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than $\frac{1}{2}$ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

Improved Perfecto CANTALOUPE

113 95 days. This variety has achieved great popularity. Finest MELONS for Shipping

HOW TO GROW 'EM

Rich sand loam soils are considered best for Watermelons, but good crops are grown on any well-drained, fertile soil. Adding well-rotted manure to soil gives the plants a good start and to commercial growers we recommend an application of 600 to 800 pounds of commercial fertilizer (analyzing

about 4 per cent ammonia, 12 per cent phosphoric acid, and 4 per cent potash) to the acre. Space hills at least 10 feet apart. This method will give about 360 hills to the acre. When the soil has become warm, drop 6 to 8 seeds in each hill and cover about 1 inch. Later thin to 2 to 3 of the largest plants. Earlier crops may be obtained by protecting the young plants with Hotkaps (see page 70). One ounce will plant 25 hills; 1½ to 2 pounds per acre.

SWEET and HOT

*the finest kinds
for Home and Market!*

For the Home or Market. Steadily becoming more popular. It is one of the most profitable truck crops in the South. An acre yields about 500 ¾-bushel hampers, and a fair estimate of returns would be \$400.00 to \$800.00 per acre. Truckers favorably located should give this crop more serious consideration. Maturity dates specified are the number of days from setting of plants to picking marketable fruit.

Culture. A high temperature is required to germinate Pepper seed. Sow the seed early in hotbeds or in protected boxes, or delay planting until the ground has become well warmed. When plants have 6 to 8 leaves, and danger of frost is over, they may be transplanted to the open ground in rows 3 feet apart and 1 ½ to 2 feet between plants. Cultivate and keep free of weeds. One ounce will produce 1000 plants; 1 pound enough plants for an acre.

Pure Bred Gulf State Tomatoes

No garden should be without its quota of Tomatoes. They require little care and yield heavily in a small space. No vegetable can be put to more uses, cooked or in salads, than Tomatoes. They are rich in vitamins, and valuable as an appetizing dish in many ways. Our Tomato seed is produced under the supervision of experienced and qualified seed-breeders; each individual type is rigidly selected and bred for earliness, productivity, and uniformity in size, shape, and color.

Maturity dates given are from the setting of plants to marketable fruits.

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit.

Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

Flower Novelties

BELLS OF IRELAND

1270 An interesting novelty item for both home gardener and commercial grower, and especially around St. Patrick's Day. Plants grow about two feet tall and produce foliage and flowers of the same attractive light green color. Flowers practically cover the stem, are delicately veined and have a small white center. For table arrangements it is completely different and unusually attractive. Bells of Ireland is also a good hot weather flower. Pkt. 30c.

CYNOGLOSSUM

1449 White Cloud (Dwarf Compact). Delights with small, dainty, pure white, forget-me-not-like blooms borne in small cloud-like clusters on a dwarf compact plant. The plant habit, size of bloom and general growth is similar to the popular Firmament. Planted together, White Cloud and Firmament creates an exquisite combination of blue and white that challenges for sheer beauty the fleecy white clouds in a celestial blue sky. Pkt. 50c.

MARIGOLD

1751 Brownie (Dwarf French Single). The contrasting hues of vivid russet red and glistening golden yellow of this new Marigold creates a strong color combination. The large crested centers are made up of hundreds of slender, glistening golden tube-like petals that seem to fairly burst from a rich mahogany-red disk of a single row of mildly serrated flat overlapping petals. The mahogany-red petals are edged with a fine line of gold. Brownie produces a generous supply of blooms 2 inches in diameter. The plant habit is dwarf and bush-like. Excellent for bedding and dwarf bouquets. Pkt. 50c.

SWEET PEA

HIGHEST
GERMINATING
SEEDS

GRASSES

FOR LAWNS AND FARMS

St. Augustine

Perennial grass for shady lawns in the lower South. It is a deep green, broad-bladed grass, creeping by means of surface runners. Seed is not available, but lawns are established by rooted runners, laid down in parallel trenches about 8 to 10 inches apart. A bushel will plant 200 square feet. Write for free leaflet. Not prepaid: Bus. \$2.25; 10 bus. \$20.00. Available April to October.

RED TOP

833 Stands wet weather and overflows comparatively well. Will hold well during the summer if cut often. Sow in the spring until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pastures. Cover seed lightly. Lb. \$1.35; 5 lbs. \$5.75. Not prepaid: 10 lbs. \$9.50; 100 lbs. \$90.00.

Zoysia Japonica

828 Zoysia Japonica. This fine-leaved lawn grass will thrive well both in full sun and dense shade. As it only grows from 3 to 4 inches tall it requires very little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to Chinch Bugs and has a tendency to crowd out Crab Grass. Full directions for planting with each purchase. Lb. \$4.75; 5 lb. bag \$21.25, postpaid.

Fancy BERMUDA Grass

829 The most dependable and permanent grass for lawns, golf-courses and athletic fields. Makes a tough, even clumpless turf that recovers quickly after cutting. Lasts for years; stands a long, hot, dry summer without injury. It is by far the most important pasture grass in the South. Succeeds on nearly all types of soil, even if poor and sandy. Loamy bottom lands well drained are best. As a grazing and fattening grass has few equals. It is palatable and relished by all live-stock. Close grazing improves its quality. On good soil will furnish two or more cuttings and frequently up to 5 tons of hay per acre. Grows well with Lespedeza and Dallis Grass, and follows winter growing clovers, such as White Dutch, Bur, Medic, Hop and Persian exceptionally well. Germinates in 20 to 30 days with proper soil moisture. Sow broadcast and cover very lightly, when ground is thoroughly warm and only on well-prepared land. Sow 12 to 15 pounds to the acre for pasture; 4 lbs. to 1,000 square feet for lawns. The seed is very small and to facilitate equal distribution may be mixed with dry soil to increase bulk. The grass spreads rapidly over the ground by means of its aggressive root system. The Bermuda Grass Seed we offer is the fine leaf cultivated turf-producing strain, testing 98% pure or better. Reuter always offers the best. Lb. 80c; 5 lbs. \$3.45. Not prepaid: 10 lbs. \$4.90; 100 lbs. \$45.00.

Hulled BERMUDA Grass

826 Reuter offers his Extra Fancy Bermuda Grass with the hull removed, a new process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. In fact, it germinates almost as quickly as Rye Grass. It is the same grade as our famous Fancy Bermuda offered above with the almost watertight hulls removed, previously believed impossible. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn. It is

revolutionizing Bermuda lawn planting with its quick, positive results.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 2 lbs. to each 1,000 (50x20) square feet of lawn, fairway, athletic or aviation field. Use 10 pounds per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify HULLED SEED when ordering, otherwise the unhulled seed will be shipped.

Prices: Lb. \$1.05; 5 lbs. \$4.65. Not prepaid: 10 lbs. \$7.30; 100 lbs. \$68.00.

American RYE Grass

840 An annual, tall, broad, flat-leaved deep green grass very valuable for winter lawns and pastures. Produces within 3 weeks, or less, a beautiful green winter lawn. It is one of the most important and valuable winter pasture grasses for the entire South. Grows from 2 to 3 feet high. Withstands severe winters perfectly. On mellow soils no preparation is needed—simply sow seed and lightly cover. Requires 10 pounds per 1,000 square feet for lawns; 25 to 30 pounds per acre when used alone for pasture. Spring sowings are conducted during January and February. Reuter offers seed of the highest quality. 5 lbs. \$1.50. Not prepaid: 10 lbs. \$1.75; 100 lbs. \$14.25.

PANIC GRASS

845 Giant Blue Panicum is a perennial bunch grass which is rich in protein and food value. It is resistant to drought and grows amazingly fast after the first several months which it takes to establish a root system. Seed should be planted in moist soil and covered lightly, using only 1 lb. 50c; lb. \$1.55; 5 lbs. \$6.75. Not prepaid: 10 lbs. \$11.00; 100 lbs. \$100.00.

RESCUE GRASS Chapel Hill strain

842-A This excellent strain of the Rescue Grass developed in the Chapel Hill area makes fine early spring pasture. Grows in tufts or bunches, often a foot in diameter and is very leafy at the base. Does well mixed with Rye Grass and Crimson Clover at the rate of 30 to 40 lbs. per acre. Furnishes nutritious grazing until May. Lb. 50c; 5 lbs. \$1.50. Not prepaid: 10 lbs. \$1.80; 100 lbs. \$15.00.

ALTA FESCUE

CARPET GRASS

822 Alta Fescue has great promise of being the greatest all year round pasture, hay and silo grass for the South. It is a perennial grass attaining a height of from 2½ to 3 feet. Grows practically the year round in favorable seasons. The growth may be somewhat slow the first year but should be rapid and vigorous after that time. Alta Fescue is adapted to nearly all soils in the South that will retain the needed moisture and is particularly tolerant to wet and even overflowing land.

The seeds may be sown in February and March. Sow at the rate of 10 to 15 lbs. of seeds per acre. Lb. 55c; 5 lbs. \$2.00. Not prepaid: 10 lbs. \$2.20; 100 lbs. \$19.00.

Kentucky 31 Fescue

823 Certified Kentucky 31 is a perennial bunch grass. The bunches increase in size and eventually make a close tight sod. It is best suited for use as a permanent pasture grass since it prevents erosion, and holds up livestock in wet weather, and produces large amounts of succulent pasture the year around. It will grow almost anywhere but the better the soil, the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Lb. 60c; 5 lbs. \$2.25. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

823-A Uncertified (98/90) Lb. 55c; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.25; 100 lbs. \$19.50.

Buffel Grass

846 The perennial bunch grass that rejuvenates worn-out fields, checks erosion, and provides excellent, quick-growing hay and grazing. As green forage or as hay its protein content is very high. It produces tall slender branches and stems, and a mass of deep roots. Grows well on sandy or heavy soil and stands severe drought.

Plant in the spring at the rate of one to two pounds of seed to the acre in rows 36 inches wide. Use a firm seed bed and seed not over ¼ inch deep. Do not plant until the ground is warm. ¼ lb. \$1.00; lb. \$3.20; 5 lbs. \$13.50. Not prepaid: 10 lbs. \$24.00.

846-A Hulled Buffel Grass. ¼ lb. \$1.65; lb. \$5.50; 5 lbs. \$25.00.

830 Carpet Grass is valuable permanent grazing grass for the South, spreading by creeping stems which root at every joint. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda, it is palatable and relished by all livestock.

It stands close grazing and heavy trampling. Can be sown over your present pasture, creek bottom, or cut-over woodland without plowing or disking. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic and White Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. It is a drought-resisting grass and furnishes fine grazing during long dry spells. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks and golf courses. Lb. 90c; 5 lbs. \$3.75. Not prepaid: 10 lbs. \$5.10; 100 lbs. \$47.00.

Dallis Grass

834 (*Paspalum Dilatum*.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Makes its fastest growth on moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought well. We know of no better grass to withstand flood conditions. Light freezes do not injure this grass.

Dallis Grass grows well with Lespedeza, also White Dutch, Alsike, Hop, Black Medic and Persian Clover. The spring planting commences in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834 Imported Seed. (50% or better pure live seed.) Lb. \$1.20; 5 lbs. \$5.15. Not prepaid: 10 lbs. \$7.70; 100 lbs. \$72.00.

Rhodes Grass

844 A valuable pasture and hay grass. Yields 6 to 8 cuttings of rich hay, each averaging 1 to 1½ tons per acre. Does not stand severe freezing. Thrives best on soils that are fairly moist. It is very leafy, slender and erect, producing stems from 2 to 5 feet in height. The hay is easily cured. Broadcast seed anytime during the early spring on well prepared land at the rate of 12 lbs per acre. Cultural leaflet free! Lb. \$1.20; 5 lbs. \$5.25. Not prepaid: 10 lbs. \$8.00; 100 lbs. \$75.00.

BAHIA GRASS

PENSACOLA

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. Lb. 60c; 5 lbs. \$2.25. Not prepaid: 10 lbs. \$2.55; 100 lbs. \$22.50.

Cattle on Pensacola Bahia Pasture

COMMON

835 An excellent pasture grass for the lower South. Bahia is a deep rooted, perennial grass forming a dense turf of leaves. The plants spread slowly by short, stout stolons and range in height up to 30 inches. Once well established Bahia will stand temperature of 12 above zero. It is widely adapted, growing on both high and low soils and will grow on drier land than other pasture grasses because of its deep root system. Sow the seed ¼ to 1 inch deep at the rate of 10 to 20 pounds per acre. You should try this grass. Lb. 60c; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.45; 100 lbs. \$21.50.

SUDAN GRASSES

FOR PASTURE AND HAY

SWEET SUDAN →

824 Sweet, juicy and more palatable to livestock than the Common Sudan, and even after the crop reaches maturity the stalks and stems are relished by cattle. Sweet Sudan has more and broader leaves, heavier and taller stalks and stools much heavier than the Common variety. It is later in maturity than the Common Sudan, thereby producing more vegetative growth and remaining green and growing longer than the Common. More grazing can, therefore, be expected. When planted side-by-side with Common Sudan, the cattle kept the Sweet Sudan grazed to the ground, while the Common Sudan was grazed down to the height of one foot. It's resistant to leaf-disease. **Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.45.** Not prepaid: 10 lbs. \$1.50; 100 lbs. \$12.00.

MILLETS

GOLDEN TYPE

853 Makes quick, easily cured, large-yielding, and nutritious hay-crop. Relished by horses and cattle. Ready in 6 to 8 weeks, and should be cut when coming into flower. Seed thickly, not less than 50 pounds to the acre, any time from April until the end of July. We offer genuine stock. **Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.40.** Not prepaid: Write for quantity prices.

PEARL CATTAIL

855 One of the most nutritious of the green forage plants. Grows 10 to 12 feet high, but cutting can commence when 3 to 4 feet high. Can be cut 3 or 4 times in a season. Does well on poor land. All stock eat it greedily and thrive on it. No plant will go further toward solving the forage problem in the South. Should not be planted until the ground is thoroughly warm. Plant until August in 3-foot rows, using 5 pounds of seed, or 20 pounds broadcast, to the acre. **Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.40.** Not prepaid: 10 lbs. \$1.55; 100 lbs. \$12.50.

STAR MILLET

856 This new synthetic variety of Cattail Millet is easier to manage and lasts longer than the common variety. It is one of the best of all temporary summer grazing crops for dairy cattle, beef cattle and hogs. Plant March through June in 19 to 20 inch cultivated rows at the rate of five to six pounds per acre. **Lb. 50c; 5 lbs. \$1.55.** Not prepaid: 10 lbs. \$1.70; 100 lbs. \$14.00.

COMMON SUDAN

825 This valuable quick-growing, heavy-producing grass should be grown on every farm in the South. Yields from 4 to 10 tons of cured hay per acre. The hay is relished by cattle, horses, and sheep. Stools out wonderfully after the first cutting. An excellent catch-crop, requiring only 45 days before the first cutting. It stands more hot, dry weather than any other pasture, and can be cut as often as four times a season. Cut for hay when in bloom. May be grown with cowpeas and soy beans. When ground becomes warm sow 5 to 6 pounds to the acre in rows; 20 to 25 pounds broadcast. **Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.35.** Not prepaid: 10 lbs. \$1.40; 100 lbs. \$11.00.

JOHNSON GRASS

827 Recognized as one of our most valuable hay and forage plants, although considered a pest in many parts of the South. No other grass makes such enormous yields of hay—3 to 4 cuttings a season—and the hay compares favorably with timothy and alfalfa. It should be cut or mowed just when the seed-heads begin to form. There is always a great demand for Johnson Grass hay, as it is relished by all stock, especially horses. In places, where it can be controlled there is no other perennial grass that makes as good yields of hay. Resists drought remarkably well. Sow 40 pounds to the acre from early spring until early fall to give you a permanent summer pasture and a hay-crop forever. Mixtures of Johnson Grass and other crops, such as oats and cowpeas, also make a good quality of hay. **Lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.10.** Not prepaid: 10 lbs. \$2.80; 100 lbs. \$25.00.

TEOSINTE

913 A giant forage plant. The yield is truly enormous and 50 tons of green forage per acre is not unusual. Grows 8 to 12 ft. high, sending up from 20 to 50 stalks from a single root. If harvested when 4 to 5 ft. high, 2 or 3 cuttings may be obtained in a single season. Plant during April and May in drills 3½ to 4 feet apart; 2 to 3 pounds plants an acre. **Oz. packet 15c; ¼ lb. 50c; lb. \$1.50; 2 lbs. \$2.80; 5 lbs. \$6.50.** Not prepaid: 10 lbs. \$11.00.

BENE

914 One of the finest crops for poultry feed and highly recommended for planting to attract quail and partridges. It's a hardy, tall, annual herb growing 4 to 7 ft. high, producing flowers followed by seed pods which scatter oily seeds in great profusion. Frequently planted to bait dove fields. Plant in rows out in the woods and also in cotton and cornfields at the last cultivation at the rate of 5 lbs. per acre. We offer the tall growing variety. **¼ lb. 30c; lb. 75c; 2 lbs. \$1.25; 5 lbs. \$2.75.** Not prepaid: 10 lbs. \$3.50; 100 lbs. \$32.00.

Certified DELTA PINELAND No. 15 Cotton Seed

AVAILABLE THIS YEAR IN:
LOUISIANA STATE CERTIFIED BLUE-TAG SEED
ORIGINATOR'S REGISTERED SEED

DELTAPINE 15

Reuter is offering this wonderful strain of Deltapine Cotton, Deltapine 15. Deltapine 15 is very productive and has a high lint percentage, or gin turnout, which has always distinguished the Deltapine variety. Whereas the length of the staple is the same as the older Deltapines this strain (15) has somewhat greater length uniformity. It also has stronger fiber; these two qualities account for the fact that 15 has definitely better spinning quality than any of the previous Deltapines.

The cotton industry has now reached the stage in which manufacturers are informing themselves on the adaptability of different cottons for their particular purposes. Not only must a cotton yield well, but it must consistently pick out in relatively good grades and, when spun into yarn must have good strength and good appearance. The great improvement in Deltapine Cotton has been attained without a corresponding loss in yield per acre.

TUXPAN
for Lower South

757 Matures in 140 days; roasting ears in 85 days. A late, tall-growing variety, originally from Mexico, especially well adapted to the Gulf Coastal Plains and Southern Florida. Its long, tight shucks make it very resistant to damage by corn ear worms and weevils, and it is probably the best of all varieties in this respect. Stalks grow from 10 to 12 feet tall. Ears are very long, large and heavy, with 14 to 16 rows of kernels. Grain is white and hard, but not flinty. Cobs are small and the shelling percentage is high. Its immense stalks make good fodder. The large, heavy ears produced by this variety make it a most desirable variety for shipping in the green state and for market. $\frac{1}{4}$ lb. 15c; lb. 40c; 2 lbs. 65c; 5 lbs. \$1.35. Alyce Clover

THE GREATEST SUMMER CLOVER FOR THE SOUTH

A Field of Alyce Clover

Louisiana White Clover S-1

700 Louisiana White Clover S1 (Certified) was bred as an improvement of the native White Clover. This improvement was demonstrated by comparison trials which showed S1 Clover as yielding an average of 7,531 pounds of hay per acre per year as to Louisiana White Clover's 5,919 pounds and Ladino Clover's 6,920 pounds. Some of this increase in forage may be attributed to the fact that S1 Clover begins growing earlier in the fall and continues later in summer. S1 Clover survived the drought during the 1952 summer and fall. Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. Inoculate with Nitragin "B". $\frac{1}{4}$ lb. 75c; lb. \$2.60; 5 lbs. \$12.00. **CROP EXTREMELY SHORT!**

SWEET CLOVERS

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during spring and early fall at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated for best results with NITRAGIN. Lb. 55c; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

MELILOTUS INDICA

738 Annual Yellow Blossom Sweet Clover. Also spoken of as "Sour Clover." A valuable winter legume for the lower South. Grows 2 to 3 feet tall and produces 5 to 10 tons of green matter by early May. Will reseed itself if cut when seeds start maturing. It thrives on all kinds of soil and grows rapidly and abundantly. Sow during the early fall or spring at the rate of 20 pounds per acre if used alone. Inoculate seed for best results with NITRAGIN. Lb. 40c; 5 lbs. \$1.10. Not prepaid: 10 lbs. \$1.15; 100 lbs. \$8.50.

ALYCE CLOVER

727 Like Lespedeza it is a summer annual reseeding each fall and volunteering the next summer, but grows twice as tall and furnishes much more hay or pasture of finer quality feeding value and palatability. When cut early for hay a second growth will produce a seed crop, 350 to 600 pounds per acre. Cut hay in early bloom and rake as soon as drying permits. It dries readily and can be baled the day following harvesting. Grows well in shade of wooded pastures or orchards. Has more root nodules than Crotalaria and is 50% better for soil improvement. Does well in acid soil if not too wet. Resistant to insects, diseases, heat and drought. Makes 2-4 tons hay per acre. Seeded on Bermuda, Dallis, Carpet or other grass sods it furnishes nitrogen that is lacking in Southern soils, and doubles the growth of grass. It has 4 times more calcium, twice as much phosphorus and $2\frac{1}{2}$ times as much protein as Carpet Grass. When cows graze on it their milk flow increases. Plant during spring and early summer at the rate of 10-12 lbs. per acre broadcast. Inoculate seed with Nitragin E. Write for free cultural leaflet. Lb. 55c; 5 lbs. \$1.65. Not prepaid: 10 lbs. \$1.95; 100 lbs. \$16.50. Write for current quantity prices when ready to buy.

White Dutch Clover

734 White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. It is not easy to tramp out, and restricts soil-washing and adds fertility. It is relished by all livestock.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN B. $\frac{1}{4}$ lb. 40c; lb. \$1.10; 5 lbs. \$4.50. Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

La. Improved White Clover

722 This improved strain of Louisiana White Dutch grows much more vigorously and will last longer during the hot Summer months. Sow at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. For maximum results inoculate seeds with Nitragin "B". $\frac{1}{4}$ lb. 55c; lb. \$1.70; 5 lbs. \$7.75. Not prepaid: 10 lbs. \$13.00; 100 lbs. \$120.00.

LOUISIANA RED STATION 1

698 Certified. Louisiana Red Station 1 Clover is a new strain of Red Clover that was released the past season. Regular Louisiana Red Clover for the past several years has been in demand far in excess of the supply. This newer Louisiana Red Station 1 Clover is also in very short supply with only 45 acres planted for seed purposes this year. While this strain of Red clover matures later than other Southern strains, it is earlier than Kenland and other Midwestern varieties. For best results inoculate seed with Nitragin "B". $\frac{1}{4}$ lb. 55c; lb. \$1.75; 5 lbs. \$7.75. **CROP EXTREMELY SHORT!**

KENLAND RED CLOVER

699 Certified. Kenland Red Clover was bred particularly for its disease-resistance. Highly tolerant to cold winters and summer droughts, it is a variety well worth sowing. Kenland produces more root and nodule growth than the regular Red clover and as a result adds that much additional nitrogen to the acre. Sow at the rate of 10 to 15 lbs. to the acre in the early fall and spring or 7 to 10 lbs. in mixtures. Inoculate seed with Nitragin "B" for best results. Lb. 95c; 5 lbs. \$4.15. Not prepaid: 10 lbs. \$6.50; 100 lbs. \$60.00.

LESPEDeza

The Wonder Crop

Unequalled for hay, pasture and soil-building. Adapted to a wider area than any other known legume. Withstands droughts that would kill other crops. Increases the grazing capacity of pastures from twenty-five to fifty percent. Grows anywhere—on acid soils, waste lands, worn-out gravelly soils and galled hillsides where nothing else of value will grow. Reseeds itself every year, even when severely grazed, but is easily killed out by a cultivated crop. Does well in mixtures in all Southern pasture grasses.

Inoculate All Lespedeza with Nitragin "L"

For a better stand and maximum yield, inoculate your seeds with Nitragin before planting. The procedure is simple and inexpensive. Full directions on each can. 100 lb. size can 55c postpaid.

GREAT SOIL BUILDERS

Sericea Lespedeza

COMMON

731 (Perennial). A wonderful, new drought-resistant, permanent legume. Thrives on poor land and acid or sour land, as well as rich soil. Its root system reaches 1 to 3 feet in the soil for nourishment, and even in the driest weather will continue to grow and flourish. Makes slow growth on poor soil the first year, but when once established, it produces an abundance of nutritious forage that is relished by all livestock. The second-year growth each plant puts out 20 to 30 stalks from 5 to 6 feet tall, producing a better quality hay in succeeding years and gives three cuttings per season. Produces as high as 3 to 4 tons of dry hay equal to alfalfa in feeding value. The roots survive the coldest winters. May be closely grazed. A heavy yield of seed. Reuter offers you only recleaned, hulled and scarified seed. If a seed crop is wanted, sow 4 to 5 pounds per acre in 3-ft. rows on well-prepared seed bed from February until July, the earlier the better. For hay broadcast 15 to 20 pounds per acre. Cover seed very lightly. Cultural leaflet free. Seed should be inoculated. See above. Lb. 65c; 5 lbs. \$2.75. For larger quantities, see price-list in front of catalog.

733 The most widely-grown variety. Does well over a wider territory than other varieties. The most important pasture legume in the South. Increases carrying capacity of pasture lands from 25 to 50%. Grows on poor soils, including acid types, and supplies grazing during the summer and fall months when most pasture plants are suffering from hot sun. On good soil will produce an excellent growth, and reaches a height of from 18 to 30 inches. The small stems of the plant make it an easily cured hay crop. Seed should be planted on a well-prepared but firm seed bed in February or March. On grazing crops sow 10 to 15 pounds per acre. When planted alone for hay crop sow 25 lbs. Lb. 95c; 5 lbs. \$4.25. For larger quantities, see price-list in front of catalog.

KOREAN

732 The earliest of the annual Lespedezas. The abundant growth, deep penetrating roots covered with nodules makes Korean Lespedeza an outstanding grazing and soil-building legume. It makes larger growth than the Common, 15 to 24 inches, single plants having a spread of 3 feet; has larger leaves, furnishes pasturage three weeks earlier. It is highly resistant to drought, and thrives on poor, worn-out soils where alfalfa and clovers fail.

Holds its leaves well and produces a full crop the first season. It is an annual, reseeds indefinitely although closely grazed. It is highly recommended for the upper South where the seasons are shorter and the sun less severe. Korean is especially good for sections with short growing seasons, because it matures its seed crop earlier than the others. It produces on all soil types where the common varieties grow, but in producing Korean for hay, fertile soil will give much greater return. If Korean is used in permanent pasture mixtures, the seed may be planted with other grasses and clovers in the spring, using from 5 to 10 pounds of seed per acre. When sown alone broadcast 25 lbs. to the acre. February and March are the best months to plant. Korean Lespedeza Clover Seed is in short supply and higher prices are expected. Lb. 60c; 5 lbs. \$2.50. For larger quantities, see price-list in front of catalog.

KOBE

730 Makes the greatest growth and thrives over the entire South. It is of spreading growth, but stands up well when the stand is thick. It produces an abundance of seed which are larger than the Common. It is more drought-resistant than the Common, being deeper rooted and starts growth earlier. Recommended for the main cotton belt, or from southern Arkansas, Tennessee and coastal North Carolina south. It greatly outyields the Common for hay and pasture in this territory with the same range of distribution. If it is to be used for hay and sown alone, sow 30 to 35 pounds of seed. On permanent pasture lands where Kobe Lespedeza is to be one of the legumes in the planting mixture, sow 10 to 12 pounds to acre. It should be planted in early spring for best results. Kobe makes an abundant all-summer and fall pasture. For soil improvement Kobe should be better appreciated. Its large root system, heavy foliage growth and adaptation to poor, alkaline soils, makes it very desirable as a soil-builder. Lb. 60c; 5 lbs. \$2.50. For larger quantities, see price-list in front of catalog.

GREAT SOIL BUILDING CROPS

Crotalaria

OUR CROTALARIA SEED IS SCARIFIED

Reuter's Crotalaria seed is hand-picked, machine cleaned and cured in the most approved manner. Our reputation stands back of every bag we sell and the seed will represent the very best this season has produced. In recent test plantings, properly cured and scarified seed produced eight times as many plants per square yard as compared to ordinary field-run, non-scarified seed.

885-A Spectabilis, Early Strain.

A new early strain in every way equal to the common variety, but matures three weeks earlier and more dwarf in growth. Makes nearly as heavy a tonnage. Can be sown from March until July. More desirable for planting in fruit and pecan orchards and will mature seed and can be plowed under before the nuts fall. Customers in upper South should plant this type. **Lb. 55c; 5 lbs. \$2.25.** For larger quantities, see price-list in front of catalog.

INOCULATE YOUR CROTALARIA WITH

Nitragin "E"; 2 bu. size, 40c

885 Spectabilis, Late.

A remarkable new summer cover crop and soil builder yielding 40,000 pounds of green weight per acre. The humus produced by such yield is of tremendous value. When turned under is the equivalent of 800 pounds of Nitrate of Soda. It is not recommended for hay. Requires no fertilization, no liming, no inoculations. Re-seeds itself under favorable conditions. Broadcast just before the last cultivation of cotton or corn. It will just about double the crop yields following it. Thrives on any soil. Broadcast 10 to 15 pounds on well-prepared land from March through June, harrowing in not over 2 inches, while the soil is moist. **Lb. 55c; 5 lbs. \$2.25.** For larger quantities, see price-list in front of catalog.

886 Giant Striata.

This variety is outstanding for its rapid and mammoth growth which makes it possible to resist weeds and grasses. It furnishes an unusual amount of green manure and nitrogen to the soil which will be of immense benefit to all subsequent crops. Sow from March to July on well prepared land at the rate of 10 to 15 lbs. per acre. **Lb. 55c; 5 lbs. \$2.25.** For larger quantities see price-list in front of catalog.

CROTALARIA HELPS CONTROL ROOT-KNOT NEMATODES

SESBANIA

884 Macrocarpa. A great summer growing fertilizer crop.

Loosens and emulsifies the soil. Citrus growers in the Imperial and Rio Grande Valley have found it superior to all other fertilizer crops, making more tonnage, quicker growth and shading the young trees during hot weather. Florida citrus growers are commencing to plant it liberally. Trucker growers are planting it in a bigger way. It requires from 8 to 10 weeks from time of germination to time of plowing under. It should be plowed under when the seed is in the dough. Attains a height of from 8 to 10 feet. Individual plants will make a limb spread of from 4 to 6 feet. The foliage is like an Acacia, with finely cut small leaves. They decay very rapidly. The root growth is very rapid, as much as 3 feet from tip to tip, and 18 inches deep in eight weeks. They are entirely covered with nodules. It has no known value other than as a fertilizer crop, or for game preserves. Quail are very fond of the seed, which are produced in abundance, and are capable of lying on the ground a long while, and remaining in good condition. Citrus growers usually drill 30 lbs. of seed to the acre, between the trees. Trucker growers should sow 40 lbs. per acre and give a light covering. Cotton and corn farmers have found Sesbania the solution of keeping up their soils, sowing at the rate of 12 to 20 lbs. per acre. For the period of growth, we know of no legume which is equal as a producer of nitrogen and humus. Cultivation readily kills it. Plant only scarified seed that germinates readily. **Lb. 40c; 5 lbs. \$1.60.** Not prepaid: 10 lbs. \$2.10; 100 lbs. \$17.50.

MUNG BEANS

710 Jumbo. The roots are crowded with nitrogen gathering nodules and it is truly a great crop to turn under for building up your soil. For hay, plants grow erect and bushy not lodging except on rich bottom land. Grows 3 to 5 feet high, easily cut and cured—stock eat it clean with less waste than peavine hay. Yields run from 500 to 1,000 pounds per acre. Mung Beans do well on sandy to heavy clay soil that will grow any kind of grain crop. Plant 3 to 5 pounds per acre in 3½-foot rows. Broadcast 10 to 15 pounds per acre. Matures in 90 to 120 days. **¼ lb. 25c; lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.10.** Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

BROOM CORN

723A Standard Evergreen. Grows 7 to 12 feet tall, and the brushes are usually from 12 to 24 inches long. The brush should be harvested when the natural green color extends from the top of the fiber to the base of the head. **¼ lb. 25c; lb. 65c; 5 lbs. \$2.75.** For larger quantities, see price-list in front of catalog.

KUDZU VINE

888: Rapidly gaining in popularity Kudzu is used primarily for soil erosion. However, more recently it is being used for pasture in conjunction with Sericea Lespedeza. Broadcast on prepared soil when soil is warm at the rate of one pound per acre. **Pkt. 10c; oz. 40c; ¼ lb. \$1.15; lb. \$3.50; 5 lbs. \$16.25.**

GROW YOUR OWN FEED CANE SEED

These Sorghums can be planted either alone or mixed with cowpeas and soy beans. Plant in 3½- to 4-foot drills, using 8 to 10 pounds per acre, or broadcast 50 to 75 pounds for forage. If sown broadcast with peas, use 25 pounds with 1 bushel of peas. Our seed is remarkably clean and of exceptional quality.

901 Improved Black Amber. Far superior in growth and yielding qualities to the original early Amber Sorghum. Not good for syrup, but fine for early green feed and silage. If planted early it will yield two cuttings a season. If grown with cowpeas or soy beans the quality of the hay is improved and a more balanced ration may be had. Grows 10 to 12 feet. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

899 Early Orange. Stalks taller and heavier than the Amber, but matures later. Yields immense crops for fodder. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

902 Red-Top or Sumac. The great hay-cane or sweet Sorghum crop for the Southwest. Its slender stalks and abundant leaves make it desirable for hay. Resists drought. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

HEGARI

905 CERTIFIED.

Yields 10 to 12 tons of green forage per acre. Leaves are broad, long and numerous. The uniform and upright seed heads of white grains do not shatter. The fodder is relished by all livestock because the stalks are very sweet and juicy. Grows 4 to 5 feet high. Matures in 85 to 110 days. Close spacing of 2 to 4 inches apart in the row is recommended for forage. Sow 8 to 10 lbs. per acre. Also sown broadcast for hay at the rate of 40 to 50 lbs. per acre. Stands dry weather well. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

904 Hegari. Lb. 40c; 2 lbs. 65c; 5 lbs. \$1.25. For larger quantities, see price-list in front of catalog.

Reuter's SORGHUM FOR SYRUP

897 Honey Drip Sorghum, Certified. Highly prized syrup-cane. Grows 9 to 10 feet high and has a very large percent of saccharine in the stalk. Under normal conditions yields 200 gallons of syrup of excellent flavor and beautiful amber color per acre. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.75. For larger quantities see price-list in front of catalog.

FETERITA

894 (Spur.) A distinct dwarf variety. Matures earlier and produces heavier yields than Kafir corn or Milo. Valuable for forage and fodder. It is a good crop to plant after oats or wheat because it is quick-maturing and its grain-feed value is nearly as high as corn. For hog-feed, cut grain-heads in the "dough." Soil should be prepared early for planting Feterita. Sow in 3-foot rows, 6 to 8 pounds per acre. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.35. For larger quantities, see price-list in front of catalog.

YELLOW MILO-MAlIZE

896 Fine grain-crop or substitute for corn. Grows 4 feet high and has large grain-heads. It is quick to mature and may be planted late in the season as a "catch-crop." The compact stalk makes harvesting much easier. Resistant to drought. Plant in 3-foot rows at the rate of 6 to 8 pounds to the acre. Lb. 40c; 2 lbs. 65c; 5 lbs. \$1.25. For larger quantities, see price-list in front of catalog.

MILWAUKEE'S COMBINE MILO

900 An improved strain of Milo Maize averaging 36 inches in height with the uniform heads carried upright on sturdy stalks which makes harvesting with a combine easy and practical. Well adapted to light or poor soil. Plant in 3 foot rows at the rate of 6 to 8 pounds per acre. Lb. 40c; 2 lbs. 65c; 5 lbs. \$1.25. For larger quantities see price-list in front of catalog.

SAGRAIN

903 Produces 8 to 15 tons of silage or if left to ripen will produce 40 to 50 bushels of grain and 4 to 8 tons of cured hay per acre. Relished by all livestock. Grows quickly—matures in 10 to 12 weeks. A safer feed crop than corn and withstands neglect and adverse conditions. Splendid combination with Soy Beans.

Plant in 3½ ft. rows, 8 to 10 seeds per hill every 12 inches. Cultivate a couple of times and thin out 4 to 5 stalks per hill. We do not recommend broadcast planting. Can be best harvested with a corn binder, shocked like oats until cured. Plant 10 lbs. per acre. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

Chicken CORN

895 (Egyptian Wheat.) Grows tall and produces 3 to 6 stalks from a single root. When grown for grain, the tops are cut, cured, and threshed like other grains. The grain is of high feeding value. Sow 8 to 10 pounds in drills 3 feet apart, or broadcast 25 pounds per acre. Matures in 120 to 140 days. It is the cheapest and best chicken-feed. Pkt. 10c; lb. 45c; 2 lbs. 80c; 5 lbs. \$1.50. For larger quantities, see price-list in front of catalog.

WHITE KAFIR CORN

891 (Black Hull.) Very stocky and leafy; valuable for forage and grain. Drill seed thinly, like sorghum, or sow broadcast. Lb. 40c; 2 lbs. 65c; 5 lbs. \$1.25. For larger quantities, see price-list in front of catalog.

Plant PLENTY of FEED CROPS

Grow Peanuts

Peanuts are a profitable "cash" crop. Easily grown on any soil. In addition to the nuts, the hay is superior to alfalfa as it contains more fats and is equal in protein. An excellent soil-improver. Shell the seed before planting, but where there is sufficient moisture this practice is not necessary. If planted in corn, 30 pounds will plant 4 acres; planted alone, 30 to 40 pounds in 2½- to 3-foot rows, dropping seed in hills 8 to 10 inches apart. Cover 1 to 2 inches deep. Cultivate thoroughly until nuts begin to form.

864 Spanish. An early, heavy bearer; bushes grow close; are easily cultivated and gathered. Nuts medium size and sweet. Lb. 50c; 2 lbs. 90c; 5 lbs. \$1.85. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$20.00.

Dwarf
Essex
Rape

DWARF ESSEX RAPE

876 Relished by all kinds of stock, but principally planted for hogs and poultry. Tops look like rutabagas, but larger; make fine "greens" for table as a substitute for turnip or spinach "greens," when young.

Grows 15 to 30 inches high and makes a crop in 6 to 8 weeks. Sow any time during the spring, summer, and fall, either in drills (4 pounds per acre) or broadcast (8 pounds per acre). Planted in small grain, will pasture 20 hogs for 3 mos. Keeps stock in fine condition. You should plant Rape for your hogs and poultry. ¼ lb.

15c; lb. 45c; 2 lbs. 80c; 5 lbs. \$1.65. Not prepaid: 10 lbs. \$1.85; 100 lbs. \$15.50.

Better
Crops

GREAT HOG CROPS

CHUFAS

815 The Chufa is a species of ground-nut, most easily grown. Any land suitable for corn, cotton, or peanuts will make a bumper crop of Chufas. Plant from April until the end of June, in 2½- to 3-foot rows, dropping 3 to 5 Chufas together, 16 to 18 inches apart in the row, and cover 2 inches deep. In the fall pull up a few plants for your stock to taste, and they will then go over the entire field and will attend to the harvesting. Requires 1 to 1½ pecks to plant an acre. The crop is usually matured about September 15, and can be left in the ground until time to turn the hogs in. ¼ lb. 15c; lb. 50c; 2 lbs. 90c; 5 lbs. \$1.85. Not prepaid: 10 lbs. \$2.40; 100 lbs. \$20.00.

ARTICHOKE

816 Jerusalem or Ground. Every hog-raiser should grow Artichokes, for they come year after year, and keep the hogs in fine condition. You grow them just as you would potatoes: Cut them two eyes to the piece and plant 2 inches deep, 15 to 18 inches apart in 3- to 3½-foot rows. In the fall when they have matured, turn the hogs into the field, and they will feed on them all winter except when the ground is wet or frozen. They are more productive than potatoes. Yields of 700 bushels have been grown on an acre of good land, but 300 to 400 bushels is nearer the average crop. Although grown principally for hogs, they are fine food for cattle, sheep and horses. Also make an excellent table dish when served hot or chilled. Requires about 250 pounds to plant an acre. Plant during March or April, the earlier the better; they stand considerable drought and extreme cold weather. Lb. 55c; 2 lbs. 95c; 5 lbs. \$1.95. Not prepaid: 10 lbs. \$2.65; bus. (50 lbs.) \$11.50.

UPLAND RICE

881 Any ground having a reasonable amount of moisture can produce a good crop of Upland Rice. Drill 25 lbs. per acre in rows 2½ feet apart and cultivate. Will make 20 to 40 bushels per acre. Should be planted in March or April for best results. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$1.90; 100 lbs. \$16.00.

JAPANESE BUCKWHEAT

728 Splendid soil-improver, good summer cover-crop for orchards, and an excellent late summer catch-crop. A great poultry-feed, and bees fed on buckwheat blooms produce more honey. Buckwheat flour makes the most delicious cakes. Sow 40 to 50 lbs. to acre, either broadcast or in drills. Lb. 45c; 2 lbs. 75c; 5 lbs. \$1.40. Not prepaid: 10 lbs. \$1.50; 100 lbs. \$12.00.

MAMMOTH RUSSIAN SUNFLOWER

912 Easily grown, an immense yielder, and as an egg-producing poultry-feed it has no equal. The leaves make good fodder; the whole plant makes fine ensilage and hog-feed. Plant from March to September, at the rate of 6 to 8 pounds to the acre, in rows 3 feet apart and hills 1 foot apart in the row; when 4 to 6 inches tall, thin to one stalk to the hill. Pkt. 10c; lb. 60c; 2 lbs. \$1.00; 5 lbs. \$2.15. Not prepaid: 10 lbs. \$2.80; 100 lbs. \$24.00.

Recleaned COWPEAS

Cowpeas are the South's greatest soil-improving and hay-crop. Pound for pound, Cowpea hay is as valuable as clover hay. Nearly equals in value alfalfa and wheat-bran. Contains four times as much digestible protein as timothy hay. Makes a fine feed for work- and beef-stock and dairy cattle. Adds nitrogen to the soil and improves its

mechanical condition. There is no cheaper way to improve land than by growing Cowpeas.

Cowpeas can be planted any time from April until August, broadcast or in drills 3 to 4 feet apart. Cultivate two or three times. Broadcast, 1 to 2 bushels are required per acre, and 2 to 3 pecks for seeding in drills. Inoculate your seed for best results.

VELVET BEANS

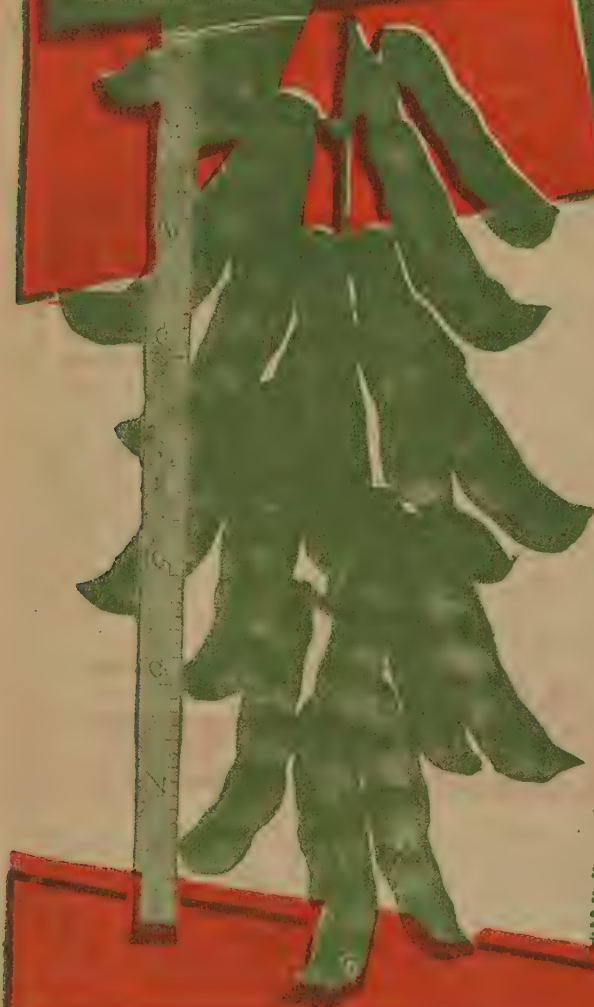

Make an enormous growth and as a soil-improver they are considered superior to cowpeas. The seed should not be planted until the ground has become warm. Plant a peck to a half bushel per acre, in rows 5 feet apart and 2½ to 3 feet apart in the row. Also grown with corn. Plant the corn in 5-foot rows and 3 feet apart in the row. The Beans are planted between the hills, and at the last working they are planted between the rows. Frequently stock is turned into the field and no attempt made to harvest the corn, or sometimes the ears are pulled from the stalks before the animals are turned in to graze. Inoculate your seed for best results. See above.

90 Days Early Speckle

713 This is the most valuable and popular variety. It is very prolific and can be planted later than other sorts on account of its early maturity. Makes a wonderful growth of vines for pasturing, and is a fine soil-improver. For the good of the land, grow Velvet Beans, and for the good of the cow, grow Velvet Beans. Two pounds of Velvet Beans in the pod will be found equal for milk production to one pound of cotton-seed meal. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities, see price-list in front of catalog.

Bush or Bunch

714 Grows 3 feet high. Matures in 120 days. Very popular as a green-manure crop in orchards. Best for growing in corn as the plants do not vine and weigh down the stalks. May also be grown with other crops. Easily harvested. Lb. 65c; 2 lbs. \$1.10; 5 lbs. \$2.50. For larger quantities, see price-list in front of catalog.

FOR HAY and SOIL BUILDING**

PALMETTO

719 (Matures in 135 days.) It produces an excellent quality of hay; the leaves and stems are of medium size. On less fertile soil, the plants grow erect, while the branches have twining terminals. The height of the plant or length of vine is approximately 6 feet. The Palmetto has produced three tons in tests at Baton Rouge. The seed is straw yellow with black hilum, and of medium size. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.

MAMLOXI

704 (Matures in 130 days.) A Mammoth Yellow and Biloxi, developed by the Delta Experiment Station. It's the highest producing of all strains tested at the station, having produced above 50 bushels per acre. It is much better than Biloxi for hay, grazing, planting in corn and soil building. Shatters less than any other variety. Mamloxi is the best edible Soy Bean yet developed, and should be considered in our food production program. Sow 2 bushels per acre broadcast to produce more hay and better quality than any other upright bean. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.

S-100

717 (Matures 120 days.) Matures 15 to 20 days earlier than Ogden, so it can be planted as late as June. It is a high yielding variety and is uniform, of medium height and stands up well, seldom shattering. The seed is small to medium in size, and of yellow color. This variety has given good performance for the past few years. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. Quantity prices in front of catalog.

OGDEN

711 This is a heavy yielding and non-shattering variety with heavy oil content. Yields in past seasons have been reported as high as 30 to 50 bushels per acre. Our opinion is that every Soy Bean conscious farmer should at least try this outstanding variety. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. Quantity prices in front of catalog.

MAMMOTH YELLOW

707 (Matures in 145 days.) Grows more than 3 feet high and can be cut with a mower. A good hay bean used by many farmers for an early hog and cattle crop. Drill in rows 3 feet wide, using ½ bushel of seed per acre, or broadcast a bushel to the acre. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. Quantity prices in front of catalog.

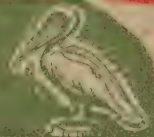

Biloxi

708 (Matures in 165 days.) For grazing, for hogging down with corn, and for soil, it is unexcelled. Best results when planted in rows 3 to 5 feet wide. Yields 10 to 15 tons of green forage per acre. Will stand wet, drought. One bushel plants 1½ to 2 acres. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.

CLEMSON

715 (Matures in 165 days.) This variety produces an excellent quality of hay. The plants grow erect on less fertile soil, while the branches have twining terminals. Stems and leaves are of medium size. The plant or length of vine grows to a height of approximately 6 feet. The seed is of medium size with black hilum, and of a straw-yellow color. One bushel will plant 2 to 3 acres if sown in rows 2½ to 3 feet apart. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00.
716 TALL-GROWING SHATTERPROOF. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.

PELICAN

705 (Matures in 145 days.) An excellent early maturing, new, yellow Soy Bean, developed by Louisiana State Department of Agriculture. It is a very strong grower with a heavy crop of foliage, making it particularly valuable as a cover crop. It is a free seeder and produces from 20 to 30 bushels of seed per acre. The seed does not scatter as readily as other varieties of Soy Beans. Pelican is the first yellow seeded Soy Bean that compares favorably with the popular Avoyelles and will, no doubt, replace same in many sections when it becomes better known. One bushel will plant 3 to 3½ acres if sown in rows 3 feet apart. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.

O-TOO-TANS

709 (Matures in 170 days.) The most popular main-crop hay and soil-improving Soy Bean. Compared with cowpeas, one-fourth the amount of seed will produce double the amount of hay. Compared to velvet beans, it makes a better cover crop, does not overrun trees or fences, and can be cut for hay if wanted. There is no legume that will put as much humus and nitrogen combined into the soil. Produces 4 to 6 tons of dry hay, or 10 to 15 tons of green forage per acre, and surpasses alfalfa in feed-value. When grown for seed, you can expect 15 to 20 bushels per acre. It is seldom affected by wet or dry weather. Less liable to shatter than other sorts. Plant in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. A bushel will plant 3 to 4 acres solid, or from 6 to 8 acres in corn middles. Lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50. For larger quantities see price list in front of catalog.

AVOYELLES

706 (Matures in 170 days.) This type is widely and successfully grown in Louisiana. The leaves and stems are large and coarse and the plant is a semi-viny, bushy type. The seeds are dull black and slightly larger than the O-too-tans. It produces 25 to 30 bushels of seed per acre. Yields over 3 tons of cured hay per acre. Louisiana planters prefer it to the O-too-tans because the Soy Bean caterpillars show a preference for O-too-tans when both are grown in the same field. One bushel plants 2½ to 3 acres in rows 2½ to 3 feet apart, 4 to 8 inches apart in drill. Lb. 50c; 2 lbs. 85c; 5 lbs. \$2.00. For larger quantities see price list in front of catalog.
